

Landscape Committee

Another area that the Landscape Committee would like to highlight to help and provide information in your landscaping needs are types of plants and shrubs that are resistant to our local wildlife, mainly deer. The provided links are a list of Deer Resistant plants found/grown in Central Texas and can be purchased at your local garden center. Regardless of the word deer resistant, it still all depends on the drought, population, and habitat of the deer and if survivability is it, your landscape will be a buffet. So be adaptable. Thanks for your community support and please direct all of your Landscape great ideas or questions to the Landscape Committee and a follow-up response will be provided.
